§01 · EXECUTIVE SUMMARY

Rebalance sales coverage to the afternoon demand peak.

Shift 30% of rep coverage into the 12:00–17:00 window and add an after-hours acknowledgement Routine. Derived from two Insights on lead-response decay, this recovers the Lead-Response Signal to target within one cycle — without new headcount.

RECOMMENDATION SCORE

88

STRONG · TOP OF QUEUE

Expected ROI	3.8×
Business impact	+\$38K / mo
Risk	Low
Confidence	88%
Effort	2 wk · Low

§02 BUSINESS CONTEXT

Lead response drives 41% of qualified pipeline. A three-week decay in the Lead-Response Signal now sits below the 4h SLA, eroding conversion at the top of the funnel during the highest-demand window.

§03 SUPPORTING INSIGHTS

- IN-2287 · Capacity concentrates before noon (91% confidence)
- IN-2261 · After-hours inbound goes unacknowledged overnight

§04 SUPPORTING SIGNALS

Lead Response	6.1h ▲18%
Rep Util · AM	91% ▲6%
Rep Util · PM	52% ▼9%
Inbound Volume	flat

§05 EVIDENCE

Leads analysed	1,880
Window	21 days
Capacity breaches	3 / wk
Counter-signals	0

§06 EXPECTED OUTCOMES

- Lead-Response recovers to ~2.4h within one cycle
- Conversion on afternoon inbound +5–7%
- System Index +3 points

§07 RISKS

- Morning coverage thins — mitigated by staggered starts
- Rep pushback on shift change — 2-week trial de-risks

§08 COST & EFFORT

CRM working hoursOps sign-off

§12 IMPACT FORECAST

If approved this week: Signal returns to target by cycle end; pipeline stabilises next month; the Index moves 87 → 90 as Delivery and Sales both clear amber.

§13 RECOMMENDED MOVE

MV-121 · Shift 30% of rep coverage to 12:00–17:00, paired with MV-122 · after-hours auto-acknowledge Routine. Both simulated against 1,880 historical leads.
