Evidence changed since review. A supporting Signal updated 40 min ago — re-run the simulation before approving.

⚠ Stale

§01 · Decision Required · MV-121

Authorize a 30% shift of sales coverage into the afternoon peak.

Approving activates MV-121 as a 14-day trial: rep coverage rebalances to 12:00–17:00 and an after-hours acknowledgement Routine goes live. Fully reversible.

§02 Why

Insight IN-2287 traced a three-week Lead-Response decay to a scheduling structure fault: 71% of inbound lands after noon, but 64% of capacity sits before it. Confidence 91%.

§03 Evidence

Leads analysed	1,880
Window	21 days
Capacity breaches	3 / wk
Counter-signals	0

§04 What Changes

NOW	Single fixed roster; afternoon inbound waits for a free rep.
AFTER	30% of coverage shifts to 12:00–17:00; after-hours inbound auto-acknowledged.

§05 Impact

Lead-Response	6.1h → ~2.4h
Afternoon conversion	+5–7%
System Index	87 → 90
Pipeline recovered	~\$38K/mo

§06 Risk

- Morning coverage thins — mitigated by staggered starts
- Rep pushback — the 14-day trial contains exposure
- Customer impact: none expected

§07 Cost & Effort

Direct cost	None · within SLA
Effort	~2 weeks
Teams	Sales, Ops
Dependencies	4 · all cleared

§08 REVERSIBILITY

Fully reversible in one click; roster reverts instantly with no data loss. The only non-undoable element is the after-hours messages already sent during the trial window.

§10 AUTHORIZATION

Assumptions

•

Inbound timing distribution holds within the 21-day window

•

No concurrent carrier or staffing disruptions

•

Reps adopt the shifted roster within 3 days

•

After-hours Routine covers 100% of overnight inbound
