

APPROVE → EXECUTE · MISSION CONTROL

Execution.

Mission control for live executions — where an approved Move becomes a running operation. Four views: the execution Queue, a live execution Detail, the Exception Center, and the Rollback Center.

03 EXCEPTION CENTER

FAULTS & RECOVERY

● FAILED Invoice auto-reconciliation halted EXE-4462 · 41% · 09:12		
ROOT CAUSE · AX The accounting integration returned 401 — the stored credential expired overnight. No records were written; the batch stopped safely at record 812 of 1,980.	RECOVERY PATH Refresh the finance-system credential, then resume from the last checkpoint. No rollback needed — the run is idempotent and wrote nothing.	SUGGESTED Resume from checkpoint
● WARNING Inventory reorder execution slowed EXE-4470 · 34% · waiting		
ROOT CAUSE · AX Two SKUs are awaiting a supplier API response; throughput dropped below the expected rate. Execution is healthy but paused on an external dependency.	RECOVERY PATH Auto-retry is scheduled every 5 min. If unresolved in 30 min, the Auxiliary will proceed with the remaining SKUs and flag the two for manual review.	SUGGESTED Retry now

04

ROLLBACK CENTER · EXE-4471

READINESS

SAFETY SCORE

Fully reversible. No data loss on rollback; only after-hours messages already sent cannot be recalled.

ROLLBACK SIMULATION

Estimated recovery	~90 seconds
Affected domains	Sales · Ops
Data loss	None
Non-reversible	12 sent messages

UNDO TIMELINE · WHAT REVERTS

● Restore original rep roster	~15s
● Deactivate after-hours Routine	~10s
● Revert CRM working hours	~20s
● Recompute Index baseline	~45s
