

SCREEN 24 · UNIVERSAL COMMAND INTERFACE

Command Palette.

A single ⌘K surface over the Command Center shell: global search, quick navigation, command execution, record lookup, recent actions, and AI-assisted natural-language commands — all keyboard-first, categorized, and scoped.

§01 THE PALETTE

OVER A DIMMED CONSOLE

§02 RESULT CATEGORIES

SCOPED BY TAB

AI ACTIONS	Natural-language commands — summarize Signals, draft a Move, explain an Insight. Each produces a reviewable artifact; nothing executes without confirmation.
GO TO	Jump to any workspace — Console, Moves, Insights, Transformation Index, domains. Direct shortcuts (G C, G M, G I, G T).
COMMANDS	Run an action — activate a domain, create a Routine, invite an operator, toggle theme. Tagged RUN when consequential.
RECORDS	Search every entity — Moves, Orchestrations, Auxiliaries, domains — with live state shown inline and a type tag.
RECENT	The operator’s last actions and destinations, surfaced when the query is empty for one-keystroke return.

§03 KEYBOARD MODEL

⌘K	Open or close the palette from anywhere
↑ ↓	Move the selection through results
↵	Run the highlighted result
TAB	Cycle the active scope (All → Navigate → Commands → Records → AI)
G · _	Direct navigation chords (G C Console, G M Moves, G I Insights)
ESC	Dismiss and return to the current screen
